Actinovate®, Biological Fungicide, Approved For Sale in Canada

December 6, 2007 (Houston, TX)— The biological fungicide, Actinovate®, manufactured by Natural Industries, has been approved for sale in Canada.

Actinovate® is water-soluble powder containing the powerful microorganism *Streptomyces lydicus* strain WYEC 108. It is an effective tool for use against fungal diseases such as powdery mildew and *Botrytis*.

The announcement comes only a few short weeks after Actinovate® was approved for sale and distribution in South Korea.

“The registration process for pesticides vary from country to country,” said Natural Industries President, Matt Kowalski. “We are very pleased to be able to offer our flagship product to our Northern neighbors.”

Actinovate® has a I-hour REI (re-entry interval) as well as a 0-day PHI (pre-harvest Interval). Actinovate® is listed with OMRI and can be used in organic agriculture.

Natural Industries

Natural Industries, Inc. of Houston, Texas specializes in developing beneficial microorganisms for use in the commercial horticulture, agriculture and turf industries. In addition to its flagship product, Actinovate® SP, Natural Industries also manufactures Actino-Iron®, a biological fungicide for soil incorporation; DeThatch-9®, a microbial thatch reducer/compost accelerator; and Actinovate® AG, a biological fungicide for outdoor agricultural production.
